

Power BI Dashboard for Claude Code

Usage, performance, orchestration & environment analytics for Claude Code, built from your local ~/.claude data

Usage

Performance

Orchestration

Environment

About

What this report shows

This dashboard analyzes local Claude Code usage data from `~/.claude` — prompts and sessions, token usage and estimated cost, tool calls and subagent orchestration (tasks and teams), and environment details (installed plugins, marketplaces, live sessions, and file-edit history).

How to use it

Use the navigation buttons on the Home page, or the page tabs at the bottom, to move between Usage, Performance, Orchestration, and Environment. Most pages share a Project and Date slicer, kept in sync across pages — filtering on one page carries over to the others.

Data & refresh

All data is read directly from your local `~/.claude` folder via a single Power Query parameter (ClaudeHomePath) — nothing leaves your machine. To see the latest activity, refresh the report in Power BI Desktop after using Claude Code.

Task Count by First Event

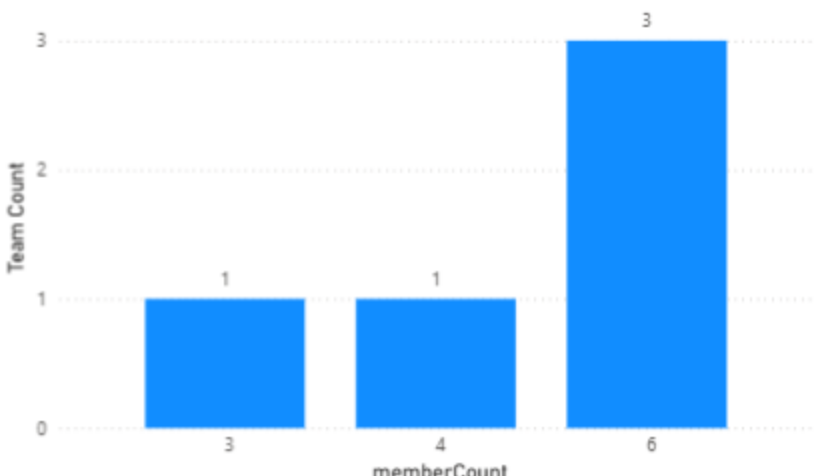

Sessions

First Event	Task Completion Rate	Description
15.06.2026	100,0%	Batch size is 500 in three places. One config value, read once at startup, validated.
15.06.2026	100,0%	Every env var the service reads, what it defaults to, and whether it is required. Put it in the README, not a wiki.
23.06.2026	50,0%	Bucketing currently assumes fixed 24-hour days, which drops or duplicates an hour twice a year. Use the zoned calendar instead.
27.06.2026	100,0%	Pull the backoff and jitter logic out of the client so it can be unit tested on its own. No behaviour change — same attempt count, same cap.
27.06.2026	100,0%	Scan the full history, not just HEAD. If anything is found, rotate first and rewrite second.
08.07.2026	100,0%	The field truncates on the slashed o and the ring A. Fix the storage, the API and the PDF template, and add a fixture that would have caught it.
08.07.2026	50,0%	The planner is choosing a sequential scan. Add the composite index and record the plan before and after — do not just assert it is faster.
10.07.2026	100,0%	Bucketing currently assumes fixed 24-hour days, which drops or duplicates an hour twice a year. Use the zoned calendar instead.
10.07.2026	66,7%	Requests time out at 30 seconds on large accounts. Queue it and email the link.

Title	File Modified	Content
2026-06-09-ingest-rewrite	09.06.2026	# Ingest rewrite — report-forge Eier: Rådgiver / sivilingeniør. Status: utkast — ikke godkjent. ## Goal Make report-forge (a PDF report generator) do this without a behaviour change that anyone outside the team can notice. The "no surprises" rule applies: same inputs, same outputs, better internals.
